

Enhanced Fuel System Cleaning

Proper maintenance is the key to automotive longevity and performance. Most motorists know to have their filters checked regularly and have their motor oil changed every 3,000 miles, but many don't know they need to maintain their fuel injectors too. Proper fuel system cleaning is just as important.

Standard Motor Products has developed a full line of chemical fuel system cleaners in their expanded Clean Family of Chemicals.

The Clean Plan from SMP is a comprehensive fuel injection cleaning program that combines motorist preventative maintenance with a regular professional cleaning. To participate, motorists can pour Super Clean Advanced Formula or EZ-Pour Clean into their full tank every 5,000 miles and see their trusted technician yearly for a professional cleaning.

Motorists will enjoy improved drivability and performance from this 'fuel system tune-up' along with better gas mileage, reduced emissions and 'at-the-pump' savings.

Why Clean?

Why, because fuel injectors get dirty!

Over time, deposits build up on injector nozzles, altering the spray volume and pattern. These deposits come from additives used in gasoline. As injectors get clogged, a vehicle may hesitate, stumble, suddenly lose power, idle rough or be difficult to start. By removing the deposits, the injectors work efficiently and the engine receives proper fuel delivery resulting in maximum vehicle efficiency, power and performance.

Enhanced Clean Professional Fuel System Cleaning Kits

The Ultra Clean and Pro Clean fuel system cleaning kits from SMP just got better! They have been re-engineered to meet the needs of today's technician with new gauges and an advanced quick-disconnect system for easy adapter hook-up and maximum efficiency. The Ultra Clean kit uses your shop air to clean fuel injectors even faster and more efficiently while the Pro Clean kit is the perfect solution for those technicians who require an aerosol based cleaning system.
